### TECHNICAL INFORMATION

#### DESCRIPTION AND APPLICATION

Synthetic lubricant for gasoline and diesel engines, developed to meet the requirements of diesel particulate filter systems (DPF) due to its low ash content (**MID SAPS**) and providing fuel savings (**FUEL ECONOMY**).

#### PROPERTIES

- Its detergent and dispersant additives ensure optimum protection against wear, keeping the engine clean and avoiding the formation of sludge and deposits produced by soot at high temperatures.
- It is a special fuel-saving lubricant, suitable for both new and old generation diesel engines, as well as for most petrol engines. This fuel saving contributes to the reduction of CO2 emissions into the atmosphere.
- Due to its low ash content, it favours the operation of anti-pollution post-treatment systems, especially particle filters (FAP/DPF).
